Subject: Questions Concerning your Mining Project
CC: <Mustafa.Ali@sce.com>, <Clinton.Char@sce.com>

Hello,
I have a few questions and missed the open houses of this project. I am a Transmission Engineer with Southern California Edison working on the TRTP 4-11 project. This project consist of new Transmission Lines and Towers along existing right from Lancaster area, through forest, and finally ending in Ontario in the San Bernardino County. Our biggest concern regarding your project would be in our right of way which is located North of Duarte where currently there are existing towers. Our concern is the the excavation and or mining causing unstable land that may cause trouble for our Towers. I would like contact information to a technical person where I can send locations of our Towers to ensure the land will not be disturbed and put our towers or foundations in Danger.

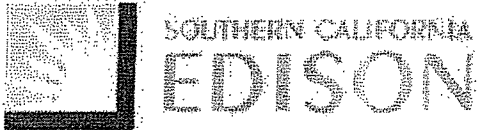

B1-1

Thank You!

Letter B1
Southern California Edison - February 16, 2010

Comment B1-1:

Response: Research of existing Edison towers indicated a transmission corridor exists approximately 2,978 feet to the west of the proposed project boundary. There are no existing power lines or transmission structures on or adjacent to the project property. There are no known utility easements on or adjacent to the Proposed Project boundary.
